Yield Monitor Data Cleaning Guide

This Yield Monitor Data Cleaning Guide helps growers clean harvest data before making decisions. Fill it in by hand and keep it with your farm records for later seasons.

Farm / unit: _____ Date: _____ By: _____

1. Confirm monitor calibration records
2. Check header position and swath width
3. Remove data from start and end passes
4. Remove spikes and implausible values
5. Check lag and flow delay settings
6. Compare totals to scale tickets
7. Check moisture correction
8. Save raw and cleaned files separately

YOUR NOTES

TIP Always keep the original file and compare final totals with scale tickets before trusting the map.
