Dairy Lockout/Tagout Procedure

A lockout and tagout procedure guide for dairy farms listing the steps to shut down and secure equipment before cleaning, clearing or repair work.

Farm / unit: _____ Date: _____ By: _____

1. Tell affected workers
2. Shut down the equipment normally
3. Disconnect energy sources
4. Apply locks and tags
5. Release stored energy
6. Verify the machine cannot start
7. Perform the work
8. Remove tools and clear people
9. Remove locks and restart safely

YOUR NOTES

TIP Follow the machine's manual and OSHA guidance, and give each worker their own lock.
