Break-Even Analysis Calculator

A calculator sheet for working out the break-even point for an enterprise, meaning the price or output needed to cover costs. Helps farmers set price floors and judge risk.

Farm / unit: _____ Date: _____ By: _____

Enterprise and unit of sale _____

Total fixed costs _____

Variable cost per unit _____

Expected sale price per unit _____

Contribution per unit _____

Break-even output per period _____

Break-even price at expected yield _____

Margin of safety _____

Notes on assumptions _____

NOTES / CALCULATIONS

TIP Test a low price and a low yield case as well as your best guess, so you know how much room you really have.
