Feed Sampling Protocol

A protocol for sampling feed so lab results represent the whole lot. Farmers, mills and nutritionists use it to collect, label and ship samples consistently.

Farm / unit: _____ Date: _____ By: _____

1. Decide which feeds need sampling
2. Gather clean tools and sample bags
3. Take several subsamples from the lot
4. Combine and mix subsamples
5. Fill the lab bag, removing excess air
6. Label with feed, lot and date
7. Store the sample as the lab directs
8. Ship and log the submission

YOUR NOTES

TIP Use the lab's own sampling instructions when they differ, and keep a retained sample of each lot.
