Forest Disease Identification Guide

A forest disease identification guide for recording symptoms on trees. It helps landowners note signs, photograph problems, and pass accurate details to a forest health expert.

Farm / unit: _____ Date: _____ By: _____

1. Note the tree species and location
2. Check leaves for spots or wilting
3. Inspect bark for cankers or oozing
4. Look for fungal growth at the base
5. Check roots and soil conditions
6. Photograph symptoms up close
7. Record how many trees are affected
8. Compare with extension references
9. Request a diagnosis if unsure

YOUR NOTES

TIP Do not move infected wood or soil to new areas until a specialist tells you how to handle it.
