Land Plane Adjustment Guide

A land plane adjustment guide that lists the settings to check, from hitch height to blade angle, to help you level fields and farm roads evenly.

Farm / unit: _____ Date: _____ By: _____

1. Read the maker's manual for setup
2. Hitch the plane level to the tractor
3. Check cutting edge condition
4. Set front and rear blade positions
5. Adjust the tongue and hitch height
6. Set cut depth for the first pass
7. Make a test pass and check the results
8. Adjust and check again on a second pass
9. Record the settings that worked

YOUR NOTES

TIP Take small cuts for the first pass and adjust in small steps, since big changes can leave ridges.
