Dilution Calculator for Pesticides

Use this dilution calculator for pesticides to work out how much product goes into a tank, by writing the label directions and tank size in each line, then checking the math twice.

Farm / unit: _____ Date: _____ By: _____

Product and label directions _____

Tank size _____

Area to be treated _____

Output per area from calibration _____

Total mix needed _____

Product amount needed _____

Water amount needed _____

Checked by second person _____

NOTES / CALCULATIONS

TIP Have a second person check the math before mixing, and always follow the label for product amounts.
