Vegetable Disease Management Guide

This vegetable disease management guide lays out practical steps for preventing and tracking disease in vegetable crops, from clean seed to rotation, watering and scouting.

Farm / unit: _____ Date: _____ By: _____

1. Start with clean seed or transplants
2. Plan rotation by crop family
3. Prepare well drained beds
4. Space plants for airflow
5. Water at the base
6. Scout and record symptoms
7. Remove infected plants
8. Clean up residue after harvest

YOUR NOTES

TIP Keep a simple field map with notes so you can see which beds repeat disease problems.
