Poultry Lockout/Tagout Procedure

A poultry lockout and tagout procedure guide for shutting down and securing machines before service. Workers use it to avoid injury from unexpected startup. Reuse it whenever the task comes up again.

Farm / unit: _____ Date: _____ By: _____

1. Tell affected workers about the shutdown
2. Identify the machine and its energy sources
3. Shut the machine down normally
4. Isolate each energy source
5. Apply locks and tags
6. Release or block stored energy
7. Verify the machine cannot start
8. Restore power only after all clear

YOUR NOTES

TIP Each worker should apply their own lock, and review OSHA lockout guidance for your operation.
