Sheep Quarantine Protocol

A step-by-step protocol for isolating new or returning sheep before they join the flock. Use it every time an animal arrives from another farm or a show.

Farm / unit: _____ Date: _____ By: _____

1. Set aside a pen away from the flock
2. Record the animal's ID and source
3. Inspect for signs of illness on arrival
4. Feed and water the quarantine pen last
5. Use separate tools and clothing
6. Watch and log daily health checks
7. Discuss testing with your veterinarian
8. Release only after your veterinarian approves

YOUR NOTES

TIP Decide the quarantine length with your veterinarian before the animal arrives, so everyone follows the same plan.
