Swine Lockout/Tagout Procedure

This Swine Lockout/Tagout Procedure lays out isolating machinery for service as ordered steps for swine producers and workers. Read it through first, adapt it to your farm, and keep a copy for the crew.

Farm / unit: _____ Date: _____ By: _____

1. Tell the crew before starting
2. Identify all energy sources
3. Shut down the machine
4. Disconnect or isolate power
5. Apply your lock and tag
6. Release stored energy
7. Verify the machine is off
8. Do the service work
9. Remove tools and restore guards
10. Remove locks and restart

YOUR NOTES

TIP Follow your machine's manual and your written procedure, and let only the person who set a lock remove it.
