Precision Agriculture Implementation Guide

A step-by-step guide for farm owners and managers planning to bring precision agriculture tools into their operation, from setting goals through training, so each purchase fits a clear need on the farm.

Farm / unit: _____ Date: _____ By: _____

1. Define the problem you want technology to solve
2. Inventory current equipment and data records
3. Talk with neighbors and your extension office
4. Pick one field or task for a first trial
5. Request demonstrations from several providers
6. Confirm equipment compatibility before buying
7. Train every operator on the new system
8. Review results after one season and adjust

YOUR NOTES

TIP Start small on one field so mistakes stay cheap, and write down what worked before expanding to the rest of the farm.
