Smart Irrigation Controller Setup

A setup guide for smart irrigation controllers, helping users connect the controller, enter zones, and set schedules that follow the weather and soil. Print it and keep a copy with your records.

Farm / unit: _____ Date: _____ By: _____

1. Mount the controller per the manual
2. Connect it to the network
3. List each zone and its crop
4. Enter soil and sprinkler details
5. Link a weather source
6. Set start times and rain delay
7. Test each zone by hand
8. Review run history after a week

YOUR NOTES

TIP Watch the first few runs in person to catch leaks or misaligned heads before they waste water.
